

Erratum

In this issue, in the article “Segregation Analysis of Phenotypic Components of Learning Disabilities. I. Non-word Memory and Digit Span,” by Wijsman et al. (67: 631–646), there is an error in table 1; in addition to the

external parentheses indicating that this value is constrained by other parameters, the formula for M_A in “ g_{AB} ” column also should have interior fences for the numerator: $((g_{AA} + g_{BB})/2)$. The publisher regrets this error.
